Tangent AMP-30 Micro amplifier

MAKING YOUR MUSIC GROW

We usually use our personal music players when we're on the move: during a run, riding the train to work, or even just walking the dog. But when you come home, wouldn't it be great to share your favourite tunes with your family & friends? And just continue listening to the rest of the song that was playing?

Just connect your personal music player to the new Tangent Ampster, and experience how your music can grow. The Tangent Ampster is a small amplifier that allows you to enjoy your digital music directly on a pair of high-quality speakers. Your music grows into an enveloping experience, faithfully reproduced from your choice of digital music source.

The Tangent Ampster features one of the simplest operating principles there is: plug-and-play.
Just connect your preferred music source and a pair of speakers, twist the single operating knob, and you're ready to rock. Try it with two Tangent EVO E4 speakers and form a great sounding, great looking partnership. Tangent Ampster can also be used with existing speakers, so don't fret if you're completely happy with what you've already got.

Tangent Ampster can be used with almost any player or phone delivering a line-out signal. But how in the world could you design a universal holder, when there are zillions of these different devices containing music? The design team found the answer by combining geometry and an item originating in a time when LP's ruled the music scene. The striking triangular-shaped bean bag holder is the perfect partner to the Tangent Ampster. Stand it up, lay it down, turn it around: it is always ready to give your music source a comfortable place to chill out while providing the music. A USB-connection also lets you charge your player at the same time.

Two sets of banana plugs (provided) offer an outstanding connection to your speakers, letting your small music player fill up the room just like the other big-boy stereos on the market.

Mini bean bag included
